Evron Advanced Service for Acumatica

Fully Unified End-to-End Landscaping & Construction Solution

What is Evron Advanced Service for Acumatica?

Evron Advanced Service for Acumatica (EAS) is a comprehensive solution designed specifically for landscaping and construction companies looking to streamline operations and increase efficiency. Our software, natively built within Acumatica ERP, allows you to easily track your financials, manage contracts and quotes, and oversee your crew's activities within a single, unified ERP system.

How can you benefit with EAS?

Do you want to avoid dealing with laggy systems, difficulty syncing data, and limited customization options in your business software? We understand.

With EAS, you create accurate and competitive quotes, manage your contracts and billing, and track your revenue and expenses, all within one unified system. You can also leverage Acumatica's native advanced analytics and reporting features to gain insights into your business performance and identify opportunities for improvement.

Discover how to reduce costs, improve profits, and maximize resources by gaining a 360-degree view of your business.

> "
>
> "We needed to implement a solution **adapted to our service offering, advanced contract quoting and billing needs**. Evron did just that with EAS. The team at Evron brought their knowledge of Acumatica to the table, and they helped us customize the solution to our specific needs and trained our staff on how to use it effectively. The team was flexible, adaptable, and creative in solving our complex requirements. We highly recommend their services."

EVRON

Evron Advanced Service for Acumatica

Key Features

Service Contract Quoting

You can accurately define the prices and costs of each service contract quote, including materials, labour, and other expenses. This ensures that you stay within budget and maximize profitability.

Property Takeoffs

You can define an unlimited number of property measurements per location and accurately calculate the materials, labour and other expenses needed for a service contract, helping to streamline the bidding and estimation process.

Crew Time Entry

You can keep track of the time the technicians and other employees start and finish the working day. Comparing it to work performed gives you accurate reports on employee performance and future payroll payments.

Equipment Tracking

Allows the identification of associated costs and usage of vehicles and any other equipment used during the service activities like fuel consumption, repairs, equipment usage, lease, insurance, depreciation, and other expenses.

Advanced Billing

On top of the pre-existing Acumatica service contract billing types, our solution introduces the new Advanced Billing options, which allow you to define any number of billing periods with different amounts as needed, regardless of the duration of the contracts.
